REALOBJECTS

PDFReactor®

Evaluation Version

Important Notes

This PDF document was created by an evaluation version of RealObjects PDFReactor. The evaluation version is fully functional, but includes this information page, which is randomly inserted at various places of this document.

About PDFReactor

RealObjects PDFReactor is a powerful formatting processor to convert XML and XHTML/HTML documents into PDF using Cascading Style Sheets (CSS) to define page layout and styles. It allows you to dynamically generate PDF documents like reports, invoices, statements and others on the fly. Fully integrated clean-up processes also enable the processing of legacy HTML web content, allowing you to easily add server-based PDF generation functionality to your application or service.

PDFReactor offers a modular and open architecture, is based on the latest W3C standards and written in 100% Java. It is easy to integrate with servlets, EJBs, Java WebServices and can also be used from PHP, ASP.NET and other scripting languages.

PDFReactor is a practical choice for publishers and developers looking for a cross-platform, easy to deploy, cost-effective XML and XHTML/HTML printing solution that does not require any XSL-FO skills to quickly achieve great looking results.
